Update:

The DTS Change Order module revolutionizes the way a retailer can create, track and manage their change orders at the individual store level. By replacing the typical VRU (Voice Recognition Unit) process with a web-based solution, DTS Change Ordering is able to shave precious time off the ordering process. Along with ease of ordering, the new module enables a retailer to track a change order from creation, to receiving through verification by the store location.

Did you know...?

DTS has three unique modules: Deposit Creation, Change Ordering, and Deposit Supply Ordering.

What users are saying about DTS...

- Treasury Department: "...accelerates funds availability."
- Sales Audit: "...provides automatic email notification of critical deposit issues such as deposit adjustments and deposits less than normal."
- Cash Accounting: "...eliminates misapplied deposits"
- Loss Prevention: "...tracks the progress of your deposit from creation, to armored carrier pick-up, to bank receipt and verification, all on-line and in real time"
- Cash Room: "...helps Control and manage armored carrier pick-up and manifesting process"

Click on the link below and see for yourself how DTS can benefit your company.
