Sub-Deposit Process is Born

We have launched a sub-deposit process, which enables a retailer to create a single deposit while capturing details about the deposit beyond denominations, sales type and deposit type. You can now use DTS to...

- Create a single deposit while still breaking down that deposit into sub-totals in order to track the origins of the deposit in your retail environment
- Compare POS totals vs. actual store deposit and log reasons why actual deposit is over or short if it is out of balance
- Combine individual deposits while maintaining the granularity of deposit information

Did you know...?

Additional banks recently began supporting DTS. Please give us a call for more details.

Click on the link below and see for yourself how DTS can benefit your company.
