## **DTS NOTES**

DTS NOTES tracks the comments made by individuals working on a deposit. Each comment is recorded and displayed alongside other deposit information. Should someone need to perform research, they can quickly access and use the research that has previously been performed. Users will find that it offers a number of benefits:

- Further eases the process of resolving missing deposits, adjustments, and deposit irregularities
- Enables end-to-end communication regarding a particular deposit
- Allows for internal communication as well external communication with your banking and armored courier partners
- Notes regarding a deposit can be automatically delivered via e-mail, real time, to people who need to know

---

### **Did you know...?**

DTS can receive information from your Point of Sale (back office) system to create deposit tickets. For some retailers this enables them to use both their POS and DTS to dramatically increase efficiency.

Click on the link below and see for yourself how DTS can benefit your company.
